Toto Part 2: A Hands-On Guide to Zero-Shot Forecasting

2 practical examples: Electricity Demand and Sparse data forecasting

[Part 1](#) explored Toto and highlighted its unique features.

To recap:

- Toto is a 151M parameter model, pretrained on 2.36 trillion tokens with **~70%** coming from Datadog's private telemetry dataset.
- Datadog also released along with Toto the BOOM dataset, a new dataset with 350M observations across 2807 distinct multivariate time series—twice the size of the GIFT-eval benchmark.

In this 2nd part, we'll walk through 2 tutorials and use Toto for:

1. **Long-context forecasting** on the Electricity dataset — with rolling forecasts across the full test series for more rigorous evaluation.
2. **Zero-shot forecasting on sparse time series** — using an example from the BOOM dataset.

Let's get started!...
